YOUR SINGLE SOURCE FOR
CASTING
ENGINEERING
& MACHINING.

Specialists in Rapid Turnaround

Griffin Industries Corp. manufactures prototype and production tooling for aluminum, iron, zinc, bronze and magnesium castings. Griffin is also a reliable source for prototype and low volume finished parts and assemblies. We meet the ever-changing needs of technology-leading companies in industries such as aerospace, medical equipment, electrical components, automotive, telecommunications and the manufacture of pumps and hydraulic valve bodies.

Through our expertise as a tool- and machine-shop, Griffin provides engineers with solutions that ensure the cost-efficient manufacturing of their part.

Support for design engineers

Griffin supports design engineers by providing the information needed to achieve the design results they envision. By identifying potential problems in the tool construction, casting and machining phases of your project, we can ensure the success of your design.

Customers rely on our expertise to assure the end quality they are seeking—within very tight time constraints. Getting it right the first time makes a vital difference.

At the forefront of technology

Our commitment to technology is the hallmark of Griffin's dedication to quality and complete customer satisfaction. From the beginning, Griffin has recognized the value of employing the latest technology to provide customers with the best results. For example, Griffin is a leader in the use of coordinate measuring technology, state-of-the-art design software, CNC machining centers and metal removing technologies.

The other side to our commitment to technology is our knowledge of CAD systems, foundry and casting processes and machining requirements. Through our knowledge we are able to improve the cost-effectiveness of a part. For example, designs can often be modified to minimize the machining required on production parts.

Our supplier base shares our commitment to excellence. Our investment in cutting-edge technology and training helps our people get the job done right and on time. In all these ways, we've earned the reputation of delivering high quality work in record time.

Design, engineering and programming

By using a variety of CAD/CAM software, including Pro Engineer, we can exchange data with nearly any design software. Transferring data is easy through our secure FTP site, and we can accept data on most modern storage media.

Experienced pattern makers and machinists

Our software and hardware capabilities allow our craftsmen to quickly transform your design into tooling and parts. Our machinists have input in the design of our tools to make sure their needs are met.

Quality control

Our quality control system ensures dimensional compatibility to current prints and critical dimensions from CAD files. All our systems and procedures are geared to accommodate the frequent changes that are made to parts as they go through the prototyping process.

YOUR RESOURCE PARTNER IN **CASTING ENGINEERING & MACHINING.**

Griffin's Goals:

- Continuous quality improvement.
- Continuous improvement in productivity.
- On-time delivery.
- Assured customer satisfaction.

Griffin's Strengths:

- Producing high quality tooling, castings and machining in record time.
- Producing engineering expertise from part design through finished product.
- Managing your prototype projects to ensure quick delivery.

Griffin can be your single source partner to help ensure that your project will be flawless in execution from tooling to finished, machined casting.

Founded in 1983 in Green Bay, Wisconsin, Griffin is a family-owned and -operated business with a solid commitment to excellence.
